## Amendments to the Claims:

This listing of claims replaces all prior versions and listings of claims in the application:

## **Listing of Claims:**

1-37. (Canceled)

38. (Currently amended) A composition for forming a <u>water-absorbing</u>, high modulus polymeric, hydrogel-forming material comprising at least one macromer and at least one monomer,

wherein the macromer comprises hydrophobic and hydrophilic regions, has a molecular weight of [[500]] 1000 to 200,000 100,000 Da and has at least two covalently polymerizable groups, and the macromer comprises at least 5% (wt/wt) of the composition,

wherein the monomer contains at least one ethylenically unsaturated group and has a molecular weight of less than 1,000 Da, and

wherein the monomer comprises at least 30% (wt/wt) of the composition, and wherein the composition forms a gel upon polymerization, and wherein the gel is characterized as having the following properties,

- a) absorbing water to less than 300% of its initial weight, on equilibration with water or body liquids;
- b) having a tensile modulus has a module of at least [[200]] 500 kPa or greater at equilibrium swelling with an aqueous solution
  - b) having a solids content of at least 20% after equilibration in water or bodily liquids;
  - c) having an elongation to failure of at least 25% at hydration equilibrium; and
- d) being sufficiently biocompatible to permit the treatment or repair of biological tissue, or used as an implant in a patient.
- 39. (Original) The composition of claim 38, wherein the composition is in the form of a fluid or paste.

40. (Original) The composition of claim 38, further comprising water.

41. (Previously presented) The composition of claim 38, wherein the macromer is poly(ethyleneglycol-trimethylene carbonate-diacrylate).

42. (Original) The composition of claim 38, wherein the monomer is selected from the group consisting of vinyl caprolactam, methyl acrylate, methyl methacrylate, styrene, N-vinyl pyrrolidone, and N-vinyl imidazole, diacetone acrylamide, vinyloxyethanol, 2-acrylamido-2-methylpropane, and methyl acryloyl lactate and mixtures and derivatives thereof.

- 43. (Original) The composition of claim 38, wherein the macromer comprises up to 50% (wt/wt) of the formulation and the monomer comprises at least 45% (wt/wt) of the formulation.
- 44. (Original) The composition of claim 43, further comprising less than 40% (wt/wt) water.
- 45. (Original) The composition of claim 41, wherein the monomer is diacetone acrylamide.
  - 46. (Canceled)
- 47. (Previously presented) The composition of claim 38, wherein the monomer has the formula AHK, wherein:

A is a residue of an ethylenically unsaturated acid that is linked to H by a bond selected from ester and amide;

H is the residue of a hydroxy carboxylic acid, a carbonic acid, or an amino acid, which is linked to K by an ester bond; and

K is the residue of an alcohol containing at least one carbon atom.

## 48. (Original) Then composition of claim 47 wherein

A is selected from the group consisting of acrylic, methacrylic crotonic, isocrotonic, tiglic, angelic, and cinnamic acids; maleic, fumaric, citraconic, mesaconic, itaconic, citric and isocitric acids, and monoesters and monoamides thereof, and mixtures thereof;

H is selected from the group consisting of glycolic acid, lactic acid, 3-hydroxy-propanoic acid, a hydroxybutyric acid, a hydroxypentanoic acid, hydroxy trimcthylene carbonic acid, hydroxy ethylene carbonic acid, hydroxy propylene carbonic acid, hydrolyzed dioxanone, a hydroxyhexanoic acid, an alpha, beta or gamma amino acid of eight carbons or fewer, and mixtures thereof; and

K is an alcohol containing from 1 to about 10 carbon atoms and at least one hydroxyl group, or a mixture of such alcohols.

- 49. (Original) The composition of claim 48 wherein A is selected from the group consisting of acrylic acid and methacrylic acid.
- 50. (Previously presented) The composition of claim 38, further comprising at least one polymerization initiator.
- 51. (Previously presented) The composition of claim 50, wherein the initiator is selected from the group consisting of chemical initiators and photoinitiators.
- 52. (Previously presented) The composition of claim 51, wherein the initiator is a component for redox-assisted photopolymerization.
- 53. (Previously presented) The composition of claim 38, wherein the macromer comprises polyethyleneglycol.
